Steve,

Please add the Hexalectris to the database.

Hey,

Yesterday I went Orchid hunting! I saw *Calopogon pallidus* in flower at JDSP along with *Tolumnia bahamense*. Then I went to a *Tolumnia* colony in southern Martin County. The big find of the day was *Hexalectris spicata* in Ft. Pierce Inlet State Park. That's what I wanted to tell you about. There are about six plants. There is not a specimen for my county and I would have to get a permit and permission from the park system to collect. This colony is the farthest south known colony on the east coast of Florida, I think it needs to be documented. I want to collect a specimen and do it legally though. This is one of the most awesome Orchid species I have seen. I thought you might like to know and put it on your list for the park. It is growing in the maritime hammock right along the nature trail.

Jake
